

Dear Customer,

We are excited to be offering customers in your area a free Water Butt this summer.

Water Butts are a simple but very effective tool to saving water which not only helps the environment but are also proven to reduce storm overflows releases by slowing down the flow of surface water entering our network. We really appreciate the support of our communities and would urge you to take up our free water butt offer.

What is a water butt?

- **Water Butt is a plastic container that we will connect to your guttering to collect the rainwater off your roof.**
- **Our water butts are unique as they are designed to slow drain.**
- **When your water butt has collected water is can be used for gardening, refilling the pond or even washing your car!**

How do you fit it?

- **Water Butts are normally simple to fit and it should take an hour to do so.**
- **Normally the water butt is connected to the gutter down pipe but this will depend on your home and garden layout.**

What happens next?

There is no cost to you – we'll deliver it and fit it for you too. It really is as simple as registering your interest below:
